

ASEPTIC AND NON-ASEPTIC FILLING MACHINES

ASEPTIC BAG-IN-BOX FILLING MACHINE

One filling machine type B200, one-head suitable for filling bags with content of 2 up to about 25 liters with all common closure systems.

The machine will be suitable for filling of Egg products.

During filling, the bag lies on a roller conveyor which is adjustable in height.

When the bag has been filled and closed, it is led underneath the filling valve towards the rear side of the filling machine, by means of a non-driven conveyor.

The machine is equipped with a steam generator with control by PLC and Inert gas injection into the filled bag as well as the bag.

BABY FILLER NON-ASEPTIC

Non-aseptic, semiautomatic single head

- * Stainless steel construction
- * All parts in contact with product in stainless or high grade synthetic material
